WHAT'S NEW · GUIDE PART 2

New features, *ready to use.*

Quick-order bonus, sales counter, purchase popups, Custom HTML pages, live Razorpay payments and more: what each feature does, how to switch it on, and how to test it.

Prepared for the Pandora Templates team
Version 2 · October 2026

Use together with
Website Guide (part 1)

AT A GLANCE

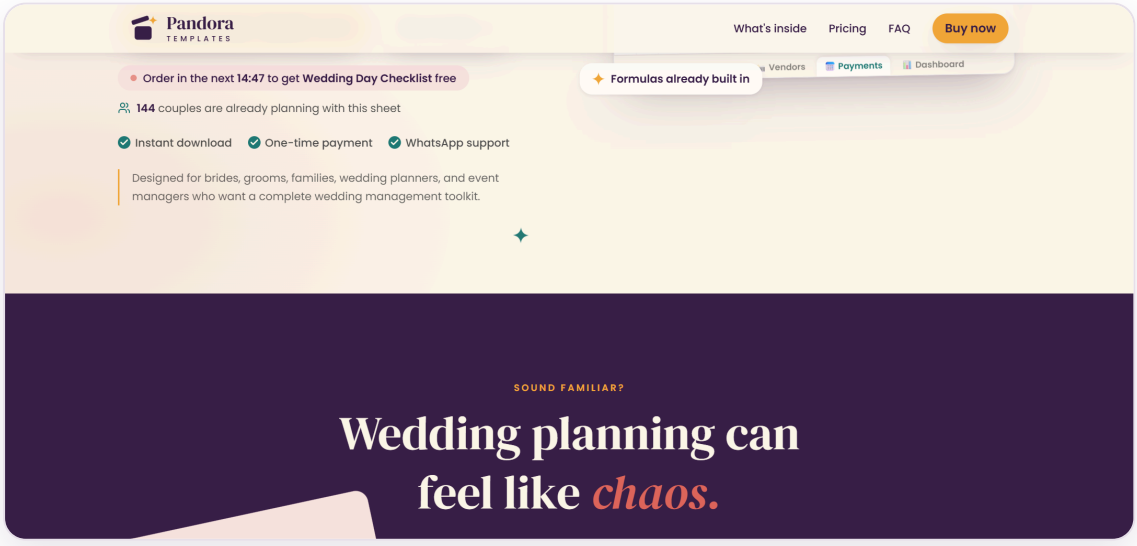

What's new

Everything below is managed from the same admin at `pandoratemplates.com/admin`.
Most of it lives in one place: your product's **Offer** tab.

Feature	Where to find it
1 · Quick-order bonus (15-minute timer)	Shop → Products → (product) → Offer → Quick-order bonus
2 · Offer price: no end or fixed end date	Shop → Products → (product) → Offer → Offer price
3 · Sales counter	Shop → Products → (product) → Offer → Sales counter
4 · Recent-purchase popups	Shop → Products → (product) → Offer (bottom)
5 · Custom HTML pages	Content → Pages → Add Section → Custom HTML
6 · Affiliate discounts up to 99%	Shop → Affiliates
7 · Real payments (Razorpay) and refunds	Razorpay Dashboard + Shop → Orders
8 · Images, videos and emails	Content → Images & videos · your Gmail inbox
9 · Test checklist	About 20 minutes

Remember

After changing a product, click **Publish changes** (top right). The live site updates within a few seconds.

The new features on the sales page: the bonus countdown and the sales counter, under the main buttons

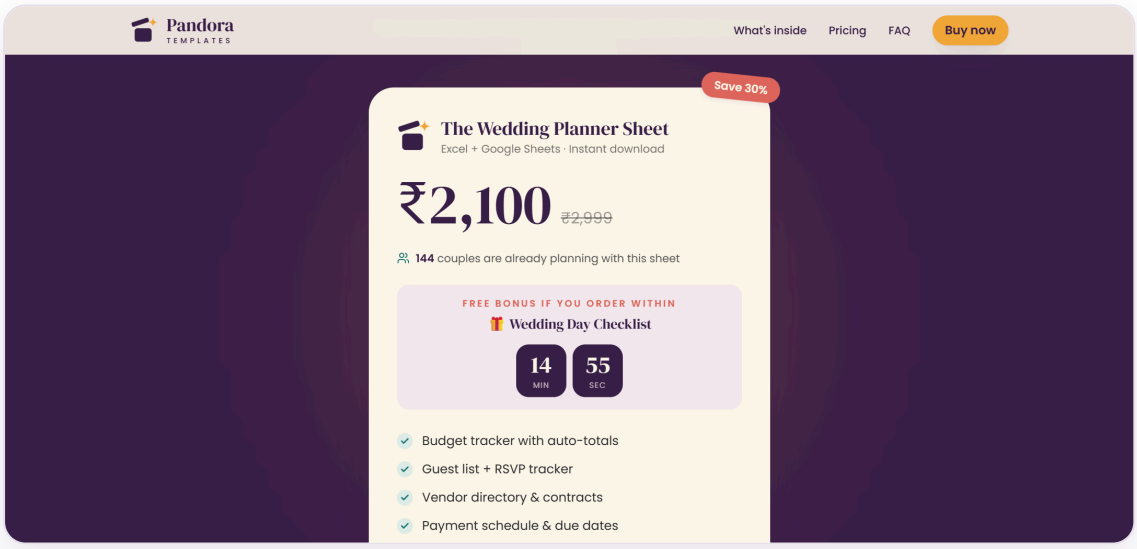

FEATURE 1

Quick-order *bonus* 01

Reward fast buyers with a free extra, such as a "Wedding Day Checklist". Each visitor gets **15 minutes from their first visit**. The site shows a live countdown, and anyone who orders in time receives the bonus automatically. **Your price never changes.**

What visitors see

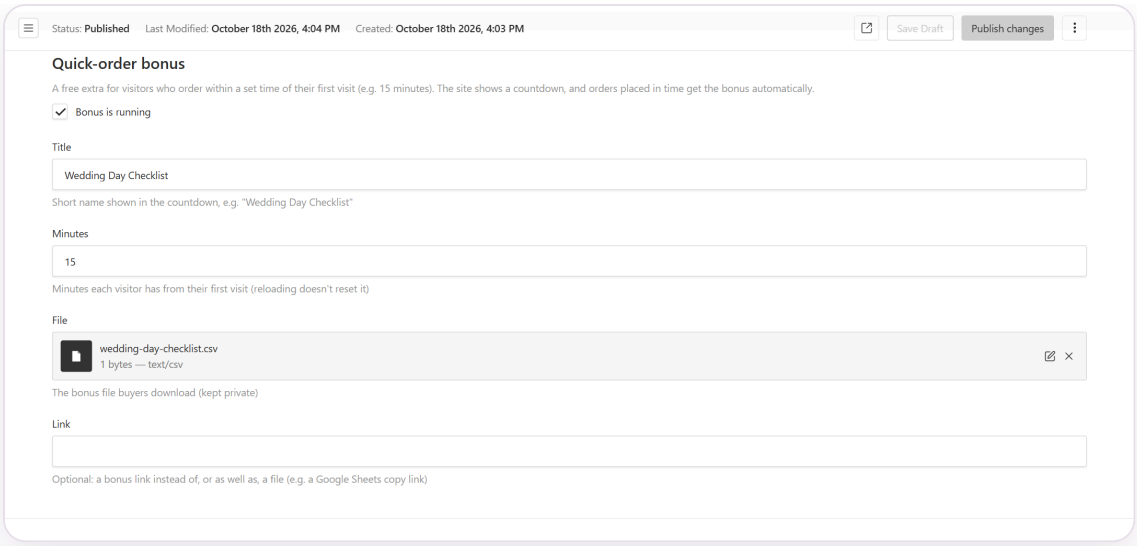

- ✓ Under the main button: *"Order in the next 14:32 to get **Wedding Day Checklist** free"*
- ✓ In the pricing card: a large countdown with the bonus name
- ✓ At checkout: *"🎁 Free bonus: Wedding Day Checklist · Included"*
- ✓ After paying: a **Download bonus** button on the thank-you page and in their email

Pricing card: the price stays the same; the countdown is for the bonus

Switch it on

1. First upload the bonus file: **Shop** → **Product files** → **Create new** (it stays private, like the main planner).
2. Open **Shop** → **Products** → **The Wedding Planner Sheet** → **Offer** tab and scroll to **Quick-order bonus**.
3. Tick **Bonus is running**, type the **Title** (short, e.g. "Wedding Day Checklist") and set **Minutes** (15).
4. Choose the bonus **File**, and/or paste a **Link** (e.g. a Google Sheets "make a copy" link).
5. Click **Publish changes**.

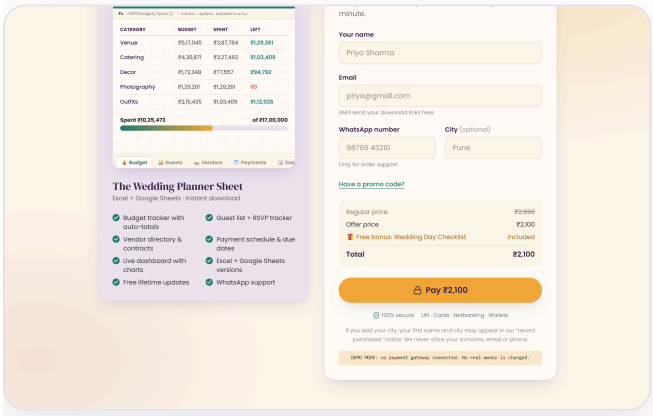

Offer tab → Quick-order bonus

Good to know

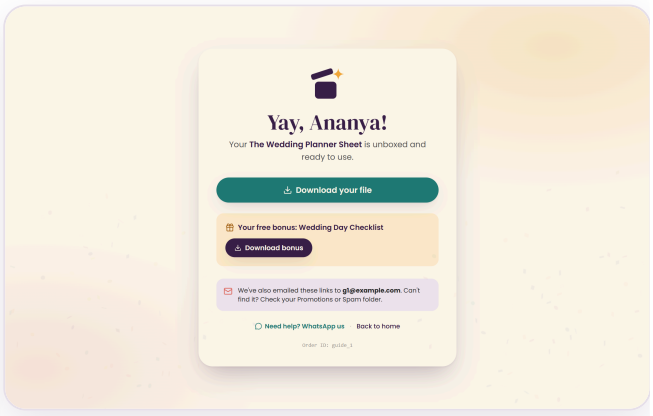

- ✓ The 15 minutes start the first time someone opens the product page. **Reloading doesn't restart it.**
- ✓ When the time runs out the countdown simply disappears. The visitor can still buy at the same price, without the bonus.
- ✓ The bonus only shows once it has a title **and** a file or link.
- ✓ In **Shop** → **Orders**, each order shows a **Bonus included** tick, so you always know who received it.

Make the bonus worth it

The bonus works best when it's genuinely useful and easy to understand in a few words: a checklist, a vendor-call script, a printable timeline. Keep the title short so it fits on phones.

Checkout shows the bonus as included

Thank-you page with the bonus download

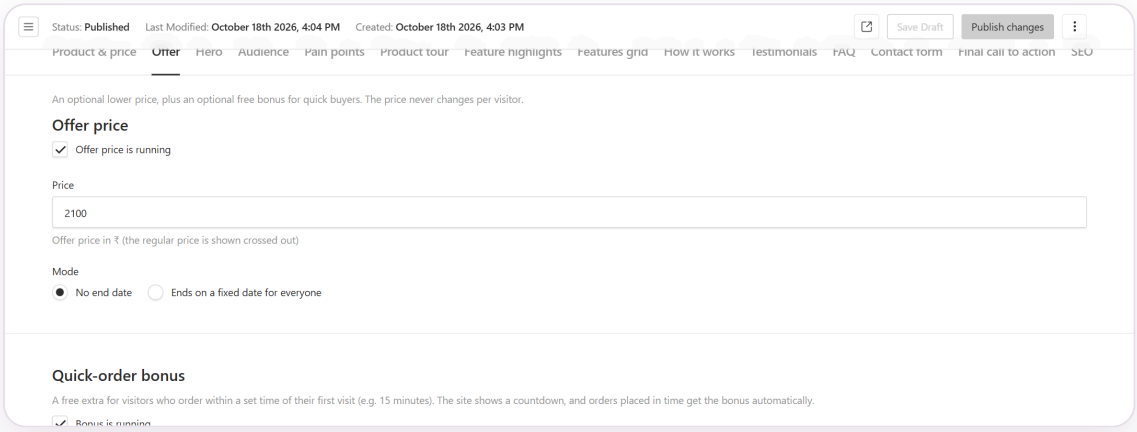

FEATURE 2

Offer price, *simplified*

02

The offer price is now the same for every visitor. Choose whether it runs **with no end date**, or ends **for everyone on a fixed date**.

1. **Product & price** tab: set your regular price (e.g. ₹2,999). It's shown crossed out.
2. **Offer** tab → **Offer price**: tick **Offer price is running** and enter the offer price (e.g. ₹2,100).
3. Pick **No end date**, or **Ends on a fixed date for everyone** and choose the date and time. With a fixed date you can also show a countdown to it.
4. Click **Publish changes**.

Offer tab → Offer price

A real deadline sells

A genuine launch price, e.g. "₹2,100 until 31 October, then ₹2,999", creates strong urgency. When the date passes, checkout charges the regular price automatically.

Check this once

If your product was set up before this update, open the Offer tab and confirm the setting is what you want, then click **Publish changes**.

FEATURE 3

Sales *counter*

03

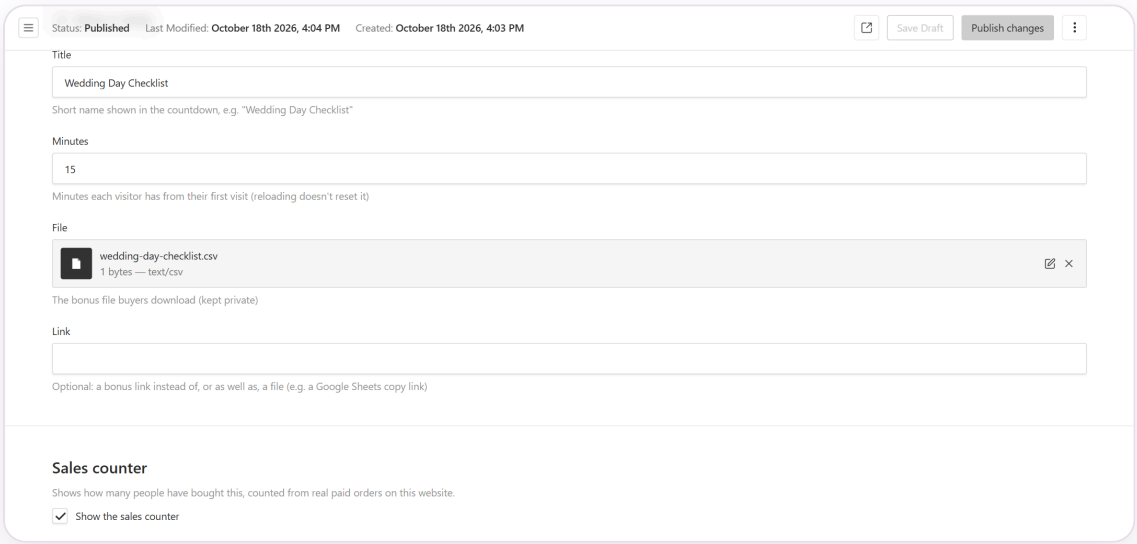

Show visitors how many people already use your planner, e.g. *"**143** couples are already planning with this sheet"*. It appears under the main button and in the pricing card, and it updates by itself with every new order.

How it counts

- ✓ Every **paid** order on the website. Refunded and unpaid orders don't count.
- ✓ Plus **Previous Sales**: genuine sales you made before the website, e.g. through WhatsApp or Instagram.

Switch it on

1. **Offer** tab → **Sales counter** → tick **Show the sales counter**.
2. **Previous Sales:** enter your real earlier sales (0 if none).
3. **Minimum To Show:** the counter stays hidden until it reaches this number (default 10), so a new launch never shows "2 couples".
4. **Text:** change the wording if you like. Keep `{count}` where the number goes.
5. Click **Publish changes**.

Offer tab → Sales counter (and the popups switch at the bottom)

Only real numbers

Enter only sales that actually happened. Customers and Meta's ad reviewers can spot inflated numbers, and India's consumer rules treat fake sales figures as an unfair practice.

FEATURE 4

Recent-purchase *popups* 04

A small card in the bottom-left corner shows real recent buyers: *"Ananya from Bengaluru bought The Wedding Planner Sheet · 40 min ago"*.

- ✓ Uses **paid orders from the last 30 days**, showing only first name and city (buyers can add their city at checkout, which tells them it may be shown).
- ✓ A new buyer appears every **~5 seconds**, never the same person twice in a row. With fewer than 4 recent buyers it slows down so names don't repeat constantly.
- ✓ No recent buyers means no popup. It starts by itself as orders come in.
- ✓ Switch it on or off at the bottom of the **Offer** tab: **Show recent-purchase popups**.
- ✓ Visitors can close the popups with the small ×.

Before launch

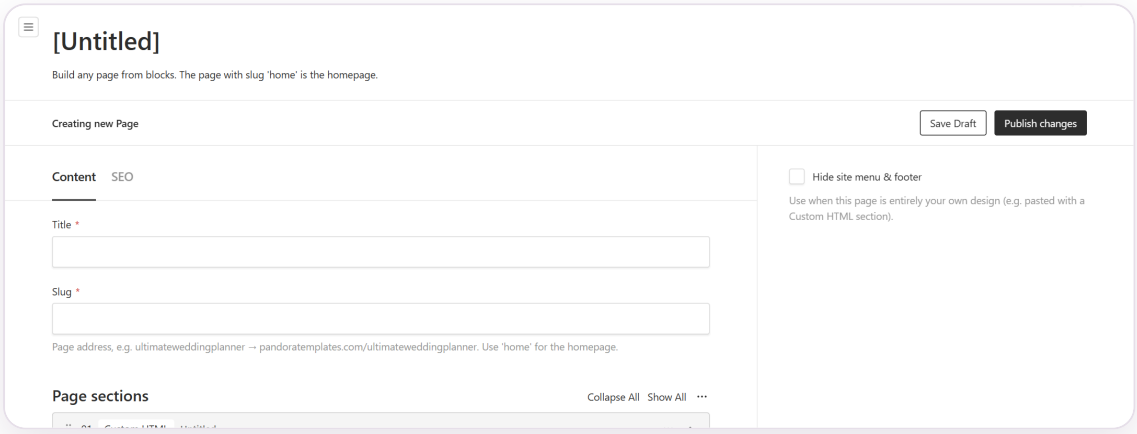

Delete test orders in **Shop** → **Orders**, so test names never appear in the popups or the sales counter.

FEATURE 5

Custom *HTML* pages 05

Already have a page designed elsewhere (Webflow, Framer, Canva, ChatGPT or a developer)? Paste its code straight into a page, with no rebuilding.

1. **Content → Pages → Create new** (or open a page). Set the Title and Slug.
2. Under Page sections click **Add Section → Custom HTML**.
3. Paste the code into **HTML code**: a small snippet or a whole page, including `<style>` and `<script>`.
4. Choose a **Mode** (see below) and a **Width**.
5. If the pasted code is the whole page, tick **Hide site menu & footer** in the right-hand column.
6. Click **Publish changes** and open the page to check it.

A Custom HTML section, with "Hide site menu & footer" on the right

Mode	Use it for
Isolated (default)	Whole pages. The code runs exactly as pasted, with its own fonts, colours and scripts, and can't break the rest of the site. The section grows to fit the content.
Blend in	Small snippets (a banner, a table, an embed) that should look like part of the site. Uses the site's fonts; scripts don't run. Better for Google.

Tips

Images in pasted code need full links (`https://…`). Upload images in **Content → Images & videos** and copy their link. For pages you want to rank on Google, put the important text in a normal **Text** section or use **Blend in**. Only paste code from sources you trust.

FEATURE 6

Affiliate discounts *up to 99%* 06

In **Shop** → **Affiliates**, the **Customer discount %** can now be anything from 0 to 99%.

Price	Code discount	Customer pays
₹2,100	10%	₹1,890
₹2,100	99%	₹21
₹50	99%	₹1 (the minimum Razorpay accepts)

- ✓ Codes stack on the offer price: offer ₹2,100 with 10% off = ₹1,890.
- ✓ Commission is a percentage of what the customer actually paid, so big discounts mean small commissions.

FEATURE 7

Real payments and *refunds* 07

Checkout now runs on **Razorpay**: UPI, cards, netbanking and wallets in Razorpay's secure popup. Money is settled to the bank account set in your Razorpay dashboard.

What you see	Meaning
Yellow **TEST MODE** banner at checkout	Test keys are in use: no real money. Pay with UPI `success@razorpay`.
No banner	Live: real payments.

Refunding a customer

1. Razorpay Dashboard → **Payments** → open the payment → **Refund**.
2. In the admin, **Shop** → **Orders** → open the order → set Payment status to **Refunded** → Save. This keeps the sales counter, popups and affiliate earnings correct.

Nobody misses their file

If a buyer closes the tab right after paying, Razorpay still notifies the website, and their order is confirmed and emailed automatically.

FEATURE 8

Images, videos *& emails* 08

Images and videos

- ✓ Uploads are stored on **Cloudinary** and load from its fast global network.
- ✓ **Videos don't autoplay.** In the product tour and Video sections they show their first frame with a ▶ play button, and only download when someone taps play. Make the **first frame** attractive.
- ✓ In the two background spots (behind the hero and the final banner), a video shows only its first frame. A good photo works just as well there.
- ✓ Size limits on Cloudinary's free plan: 10 MB per image or file, 100 MB per video. Short clips under ~4 MB are best.

Emails

- ✓ Order emails (download links and bonus) and contact-form alerts are sent through **Brevo** from **pandoratemplate@gmail.com**.
- ✓ Contact-form messages arrive in that Gmail inbox. Just press **Reply**: it goes straight to the customer. They're also saved in **Inbox → Contact messages**.
- ✓ Emails sent from a Gmail address sometimes land in spam. Sending from **hello@pandoratemplates.com** (a quick setup in Brevo) improves delivery.

Small touches

- ✓ The site and admin now show the **Pandora gift-box icon** in browser tabs and on phone home screens.
- ✓ Download links work on any domain the site runs on.

TRY IT

Test *checklist*

09

Try each new feature once. Use a private/incognito window for a "fresh visitor".

☐ 1 · Bonus countdown

3 MIN

1. Switch on the bonus (Feature 1) with a file attached, and publish.
2. Open `/wedding_planner` in a private window.
3. Reload the page.

You should see: "Order in the next 14:5x to get … free" under the main button and in the pricing card. After reloading it keeps counting down; it doesn't restart.

☐ 2 · Order with the bonus

4 MIN

1. In the same window, click Buy now. Checkout shows "🎁 Free bonus … Included".
2. Pay (test mode: UPI `success@razorpay`), then refund yourself if live.

You should see: a **Download bonus** button on the thank-you page and in the email, and **Bonus included** ticked on the order in Shop → Orders.

☐ 3 · Bonus window closing

3 MIN

1. Temporarily set the bonus **Minutes** to 1 and publish.
2. Open the page in a **new** private window and wait just over a minute.
3. Set Minutes back to 15 afterwards.

You should see: the countdown disappear. The price stays the same, and checkout no longer lists the bonus.

☐ 4 · Sales counter

2 MIN

1. Turn on the counter, enter your genuine Previous Sales, and set Minimum To Show at or below that number. Publish.

You should see: "… couples are already planning with this sheet" under the main button and in the pricing card. It goes up by one with each new paid order.

5 · Custom HTML page

4 MIN

1. Create a page with slug `html-test`, add a **Custom HTML** section and paste:
   `<h1 style="color:teal;text-align:center">Hello from my own code</h1>`
2. Publish and open `/html-test`. Then tick **Hide site menu & footer**, publish and check again.
3. Delete or unpublish the test page.

You should see: your teal heading on the page; with the box ticked, no menu or footer.

6 · Clean up

2 MIN

1. Delete test orders (Shop → Orders) and any test affiliates or pages.

You should see: popups and the sales counter showing only real customers.

Open the box. *Everything's ready.*

Questions about any feature? Message your developer with a screenshot of what you see.
