WHAT'S NEW · GUIDE PART 3

Upsells & *sheet previews.*

Sell more in every order with add-ons at checkout, and give every product its own animated spreadsheet. What each feature does, how to set it up, and how to test it.

Prepared for the Pandora Templates team
Version 3 · October 2026

Use together with
Guides part 1 & 2

AT A GLANCE

Two new features

Both are set up per product, from the same admin at `pandoratemplates.com/admin` → **Shop → Products**. Each one has its own tab on the product page.

1 · Upsells

`Product → Upsells tab`

Offer your other products at a special price on the checkout page. Buyers tick the ones they want, the total updates straight away, and the add-ons are delivered with the order.

2 · Sheet preview

`Product → Sheet preview tab`

The animated spreadsheet on each product's page now shows that product's own sample data: file name, tabs, numbers, tables, tags and charts, all filled in by you.

1	**Upsells at checkout**	Set up, what buyers see, prices & codes, delivery, orders
2	**Sheet preview for every product**	Tabs, tables, numbers, tags, charts, Product tour
3	**Test checklist**	Try both features yourself in five minutes

Nothing to switch on

Both features are already live on the website. Upsells only appear once you add some to a product. The sheet preview shows a simple version of each product until you fill it in.

CHAPTER 1

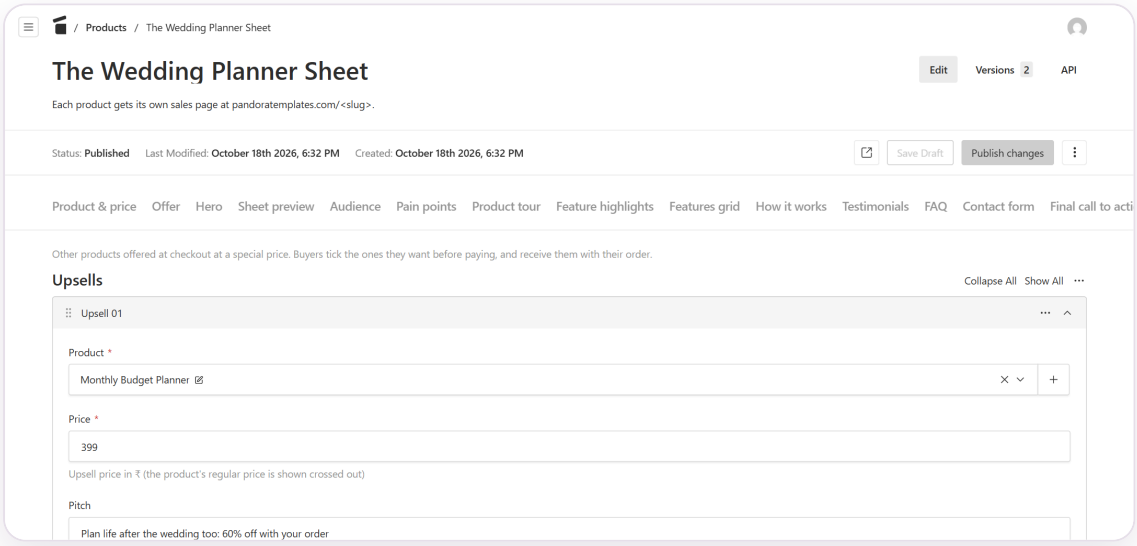

Upsells at checkout

01

When a buyer is about to pay for a product, the checkout page shows an **"Add to your order"** section above the name and email boxes. It lists other products from your shop at a special price you choose. A buyer ticks any they want, and they're added to the same payment.

Set up upsells for a product

1. Go to **Shop** → **Products** and open the product people are buying (e.g. **The Wedding Planner Sheet**).
2. Click the **Upsells** tab, then **Add Upsell**.
3. **Product:** pick another product from your shop. You can't pick the product itself.
4. **Price:** the special price in ₹ for buyers of this product. The add-on's normal price is shown crossed out next to it.
5. **Pitch** (optional): a short line on the card, e.g. *"Plan life after the wedding too: 60% off with your order"*. If you leave it empty, the product's tagline is shown instead.
6. Add more if you like (up to 10), drag them into the order you want, and click **Publish changes**.

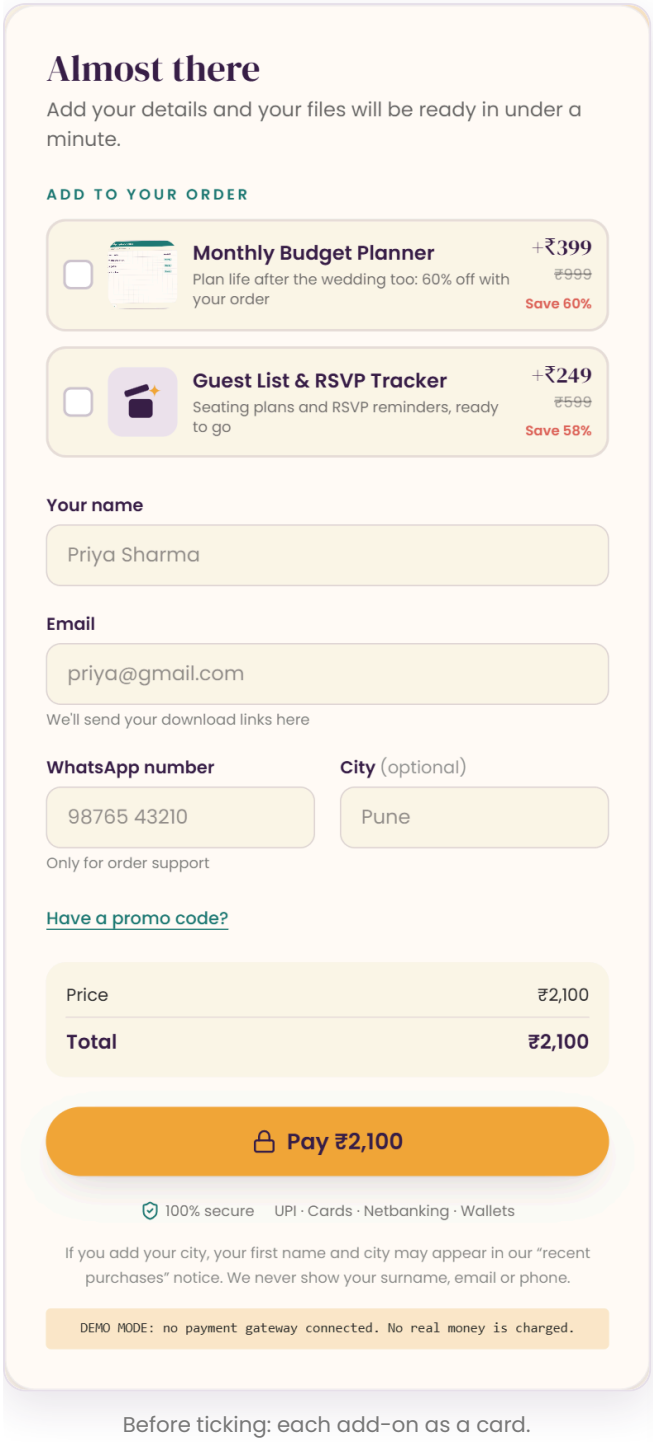

The Upsells tab on the Wedding Planner, with two add-ons and their special prices.

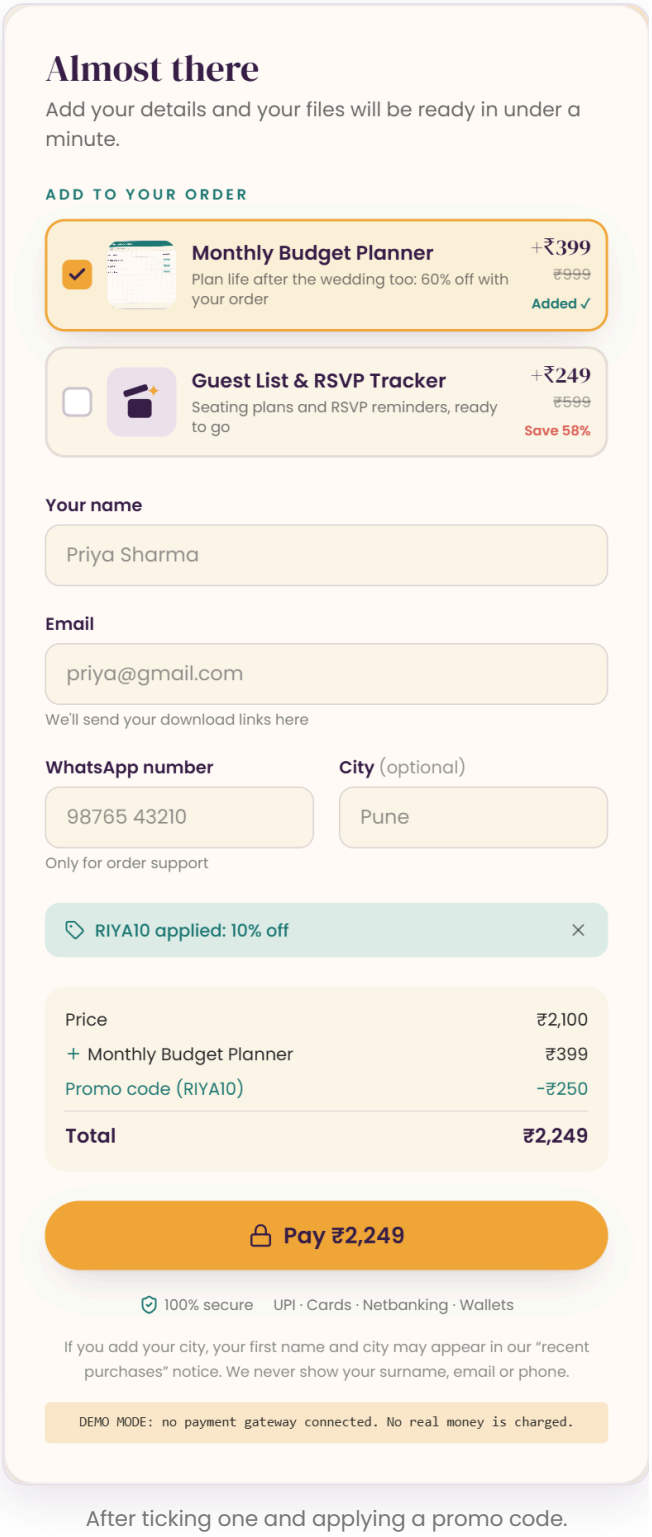

Before you add a product as an upsell

Make sure that product is **published** and has its **Download file** (and Google Sheets link, if you use one) attached under **Product & price**. Buyers receive exactly those files. Draft products are hidden from the checkout automatically.

What buyers see

Before ticking: each add-on as a card.

After ticking one and applying a promo code.

- ✓ Each card shows the product's card image, name and pitch, the special price, the normal price crossed out and a **"Save X%"** badge.
- ✓ Ticking a card turns it gold with **"Added ✓"**. The add-on gets its own line in the totals box, and the total and the **Pay** button update straight away.
- ✓ Buyers can tick as many as they like, or none. Nothing is pre-ticked.

How the price is worked out

Prices are always calculated by the website's server, using the prices you set in the admin. Nobody can change them from their browser.

Line	Example	Rule
Main product	₹2,100	Its normal or offer price, as before
+ Monthly Budget Planner	₹399	The upsell price from the Upsells tab
Promo code RIYA10 (10%)	-₹250	Applies to the **whole order**, add-ons included
Total paid	**₹2,249**	One payment through Razorpay
Affiliate commission (20%)	₹450	Worked out on the amount actually paid

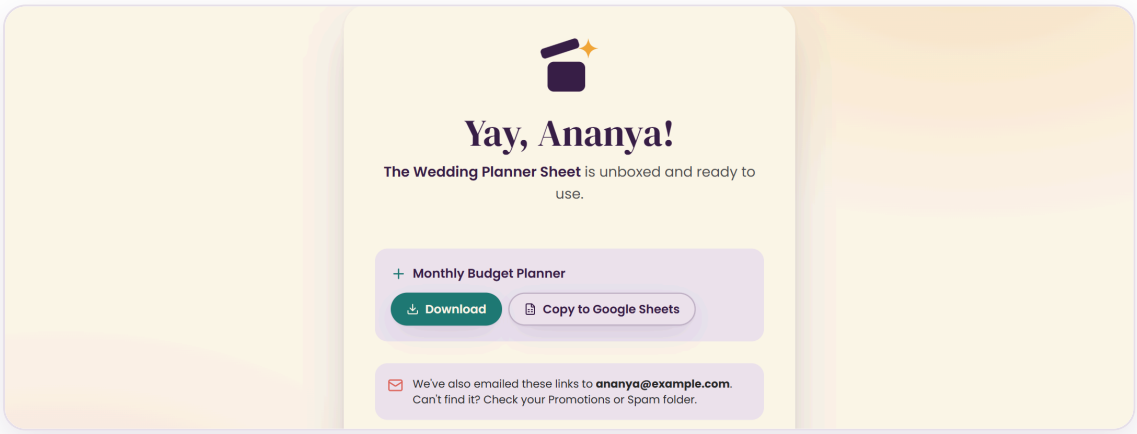

Good to know

The 15-minute quick-order bonus still belongs to the main product only. Upsells don't change it.

If you change an upsell price later, orders already placed keep the price the buyer paid.

Delivery: buyers get every file automatically

After payment, each add-on appears in its own block on the **thank-you page** and in the **delivery email**, with a **Download** button (its download file) and a **Copy to Google Sheets** button (if that product has a Google Sheets link). These appear below the main product's own buttons. The download links are private to that order, just like the main product's.

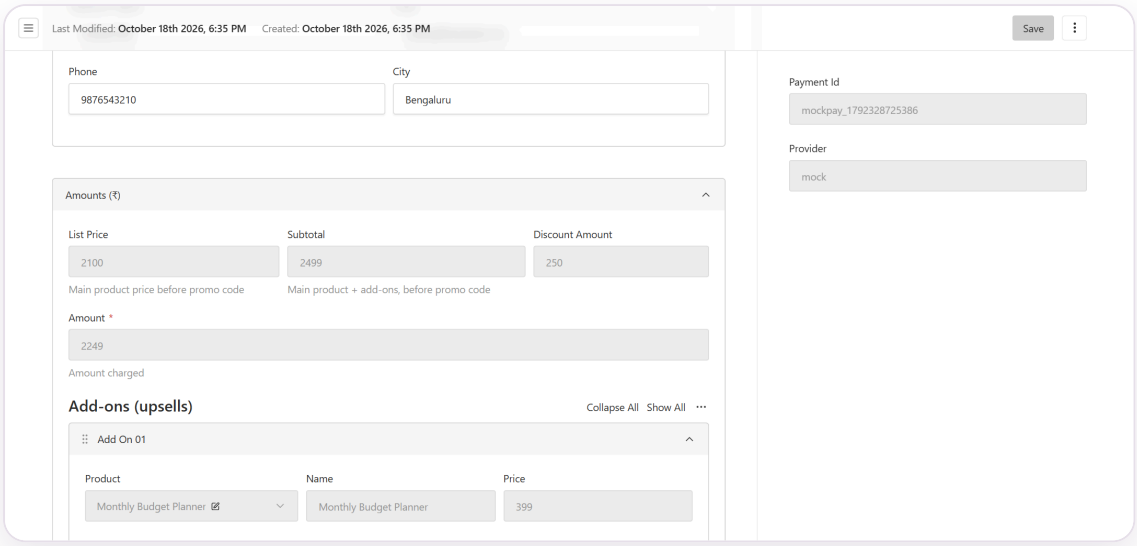

An add-on on the thank-you page, with its own Download and Copy buttons.

Seeing add-ons in your orders

Open **Shop** → **Orders** and click an order. Under **Amounts** you'll see:

- ✓ **List price:** the main product's price
- ✓ **Subtotal:** the main product plus add-ons, before the promo code

- ✓ **Discount amount** and **Amount**: what the buyer actually paid
- ✓ **Add-ons (upsells):** each add-on with the name and price it was sold at

An order with one add-on: ₹2,100 + ₹399 = ₹2,499, minus ₹250 with RIYA10, so ₹2,249 paid.

Sales counter and purchase popups

An add-on sale is a real sale of that product, so it counts on **that product's own page**. For example, when someone adds the Budget Planner to a Wedding Planner order:

- ✓ The Budget Planner's **sales counter** goes up by one (if you've switched its counter on).
- ✓ The buyer can appear in the Budget Planner's **recent-purchase popups** (first name and city only, as before).
- ✓ The Wedding Planner counts the order once, exactly as before.

Tips for upsells that sell

Keep it related

Offer products that help with the same goal, e.g. a budget or guest-list sheet with the wedding planner.

Make it a real deal

A clear saving (40–60% off) works best. The "Save X%" badge appears whenever your price is below the normal price.

Two or three is plenty

Too many choices slow people down. Put your best add-on first.

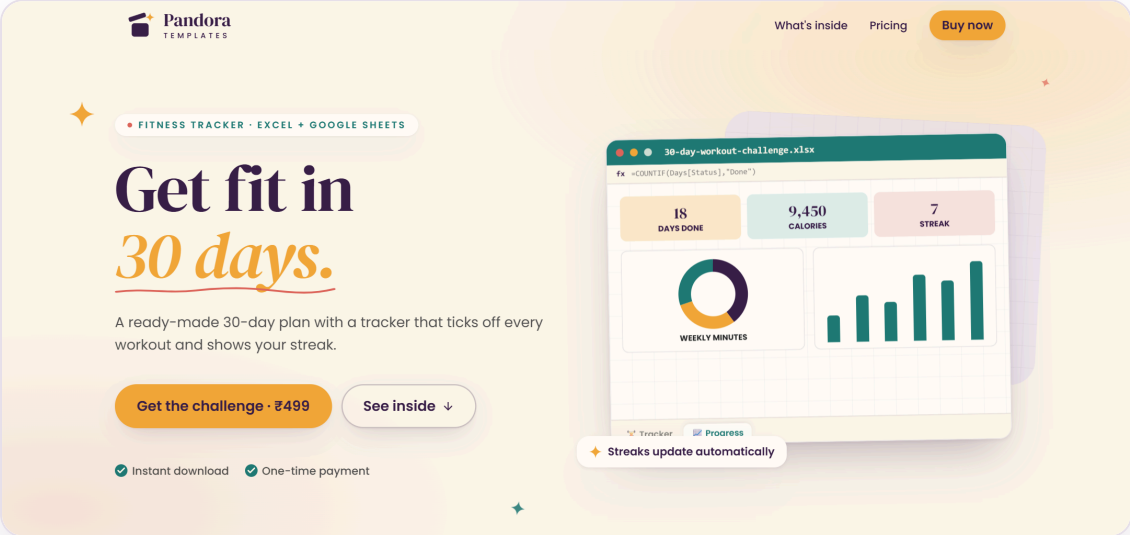

Short pitches work best

One line that says what it does and why now, e.g. *"Seating plans and RSVP reminders, ready to go"*. Longer pitches are cut after two lines.

CHAPTER 2

Sheet preview for every product 02

Every product page has an animated spreadsheet: rows slide in, numbers count up, bars grow, and in the hero the tabs switch by themselves until a visitor clicks one. Until now it always showed wedding data. It now shows whatever you enter in each product's **Sheet preview** tab.

A workout product with its own preview: its own file name, formula, tabs, numbers and charts.

Where the preview appears:

- ✓ The **hero** at the top of the product page
- ✓ The **Product tour** ("What's inside") section
- ✓ **Feature highlights**, for any item without an uploaded image
- ✓ The **checkout** order summary, if the product has no card image

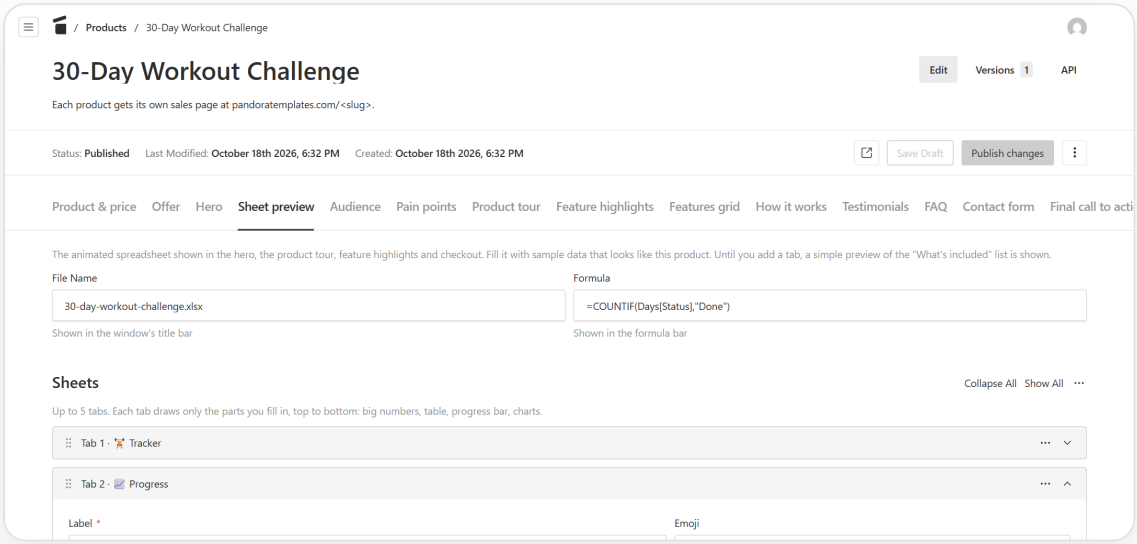

Your Wedding Planner is already done

Its preview is filled in with the familiar Budget, Guests, Vendors, Payments and Dashboard tabs, so its page looks the same as before. You can edit it like any other product. If it only shows a single "Overview" tab after this update, ask your developer to run the one-time preview step.

Set up the preview

1. Open the product in **Shop** → **Products** and click the **Sheet preview** tab.
2. **File name:** shown in the window's title bar, e.g. `30-day-workout-challenge.xlsx`.

3. **Formula:** a line for the formula bar, e.g. `=COUNTIF(Days[Status],"Done")`. It's only for show, so any short formula or phrase works.
4. Under **Sheets**, click **Add Sheet tab** for each tab you want (up to 5). Give each a **Label** and an **Emoji**.
5. Fill in the parts you want on that tab (see the next page), then click **Publish changes**.

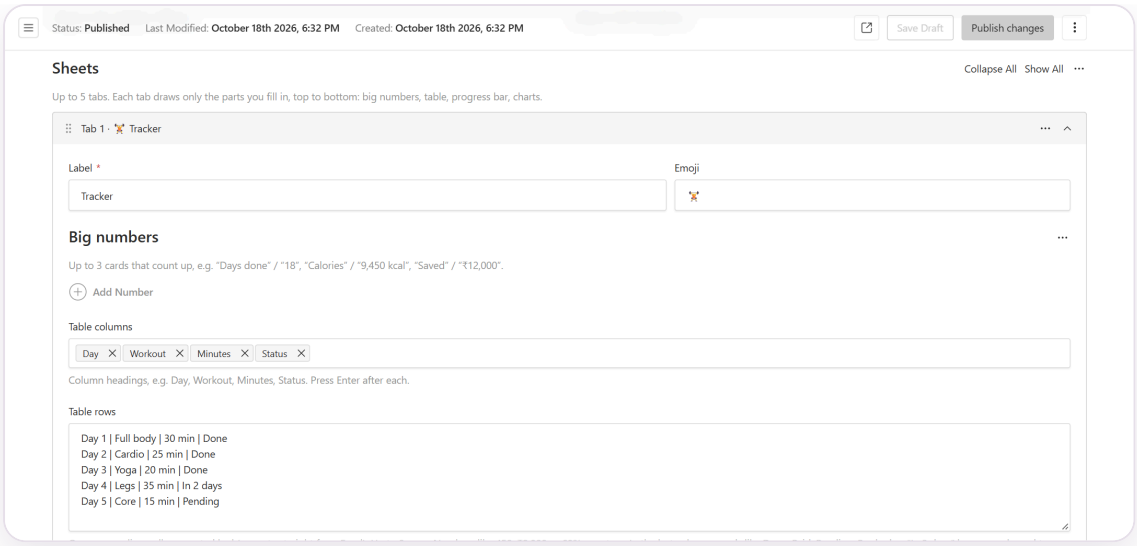

The Sheet preview tab. Each tab is listed as "Tab 1 · 🏋️ Tracker", "Tab 2 · 📈 Progress" and so on.

What you can put on a tab

Each tab draws only the parts you fill in, from top to bottom in this order:

Part	How to fill it in	Example
Big numbers	Up to 3 cards. Click **Add Number**, type a label and a value.	Days done · 18 Saved · ₹12,000
Table columns	Type each heading and press **Enter**. Up to 5; 3–4 look best on phones.	Day, Workout, Minutes, Status
Table rows	One row per line, cells separated by `|`. You can also copy cells straight from Excel or Google Sheets and paste them in. Up to 8 rows.	`Day 1 | Full body | 30 min | Done`
Progress bar	A label and a percentage (0–100).	Challenge completed · 60
Charts	Bar values and/or donut values: type each number and press **Enter**. Add a caption under **Chart label**.	Bars: 20, 35, 30, 50 Donut: 40, 30, 30

Tab 1 of the workout product: table columns, table rows and a progress bar.

Numbers that count up, words that become tags

Numbers in big-number cards and table cells count up when they appear, and keep their ₹, % or unit: `450`, `₹2,000`, `68%`, `30 min`, `9,450 kcal`. Write ₹ amounts with commas the Indian way (₹1,50,000) and they're shown the same way.

Tags: short words in the **last column** of a table become coloured tags:

Colour	Words that give it
Green	Done, Paid, Yes, Booked, Confirmed, Complete, Ready, Active, On track, ✓
Yellow	Maybe, Quote, In progress, Waiting, Review, Draft · "In 6 days" to "In 14 days"
Red	Pending, Due, No, Skipped, Not started
Red, pulsing	Overdue, Urgent, Late, Missed · "In 1 day" to "In 5 days"
Purple	Anything else, e.g. Shortlist, Planned · "In 15 days" or more

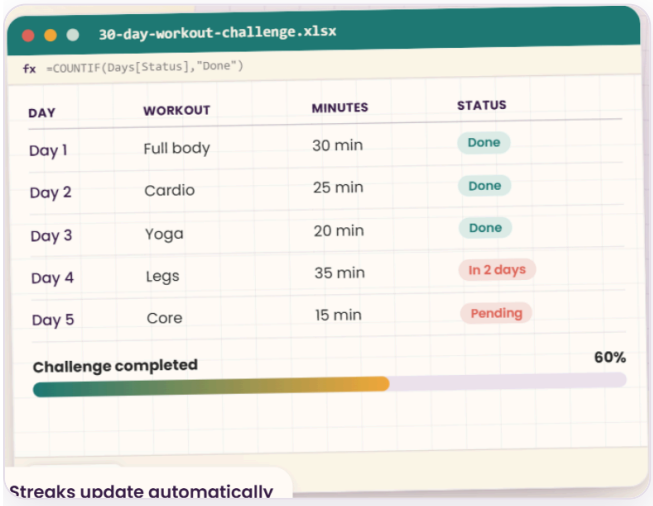

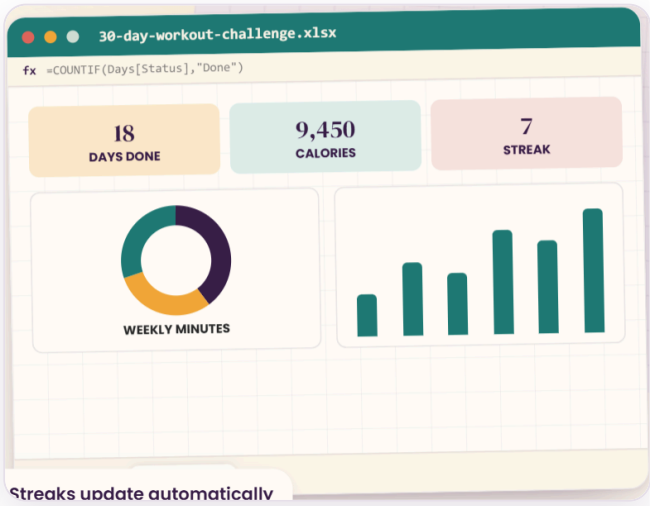

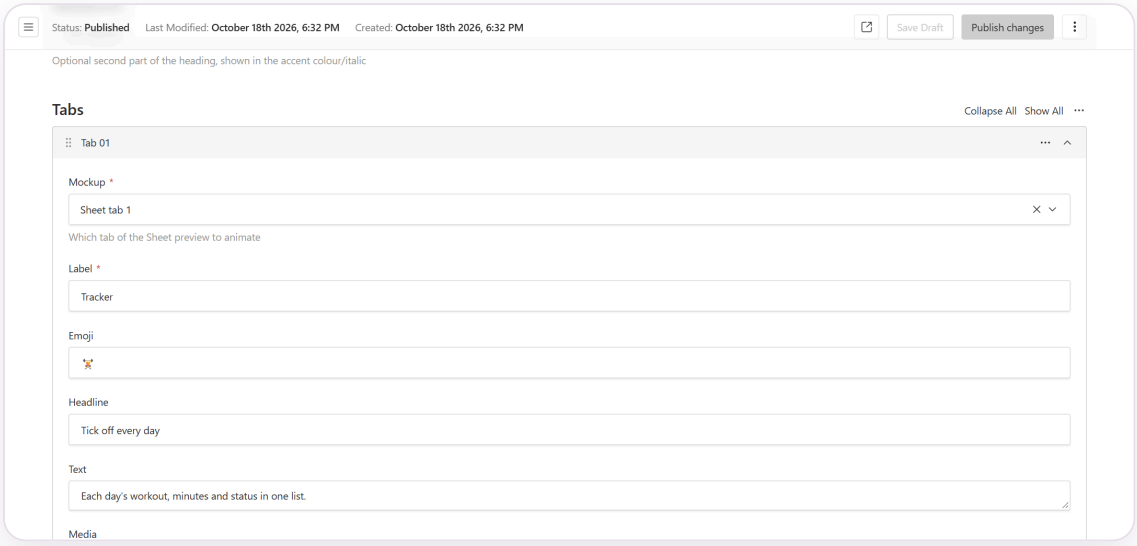

Table + progress bar, with Done / In 2 days / Pending tags.

Big numbers + donut and bar charts.

Choose which tab the Product tour and highlights show

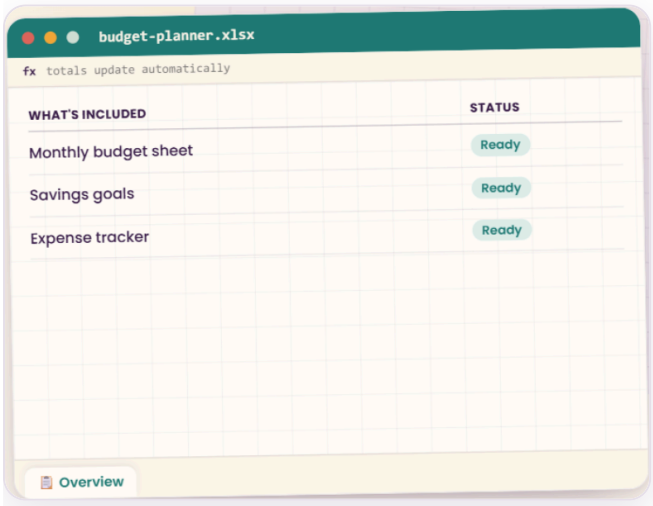

In the **Product tour** tab, each tour step has a **Mockup** picker: **Sheet tab 1** to **Sheet tab 5**. It means “show this tab of the Sheet preview” (Sheet tab 1 is the first tab in your list). Feature highlights items have the same picker, used when an item has no image. If you pick a tab number the product doesn't have, its last tab is shown.

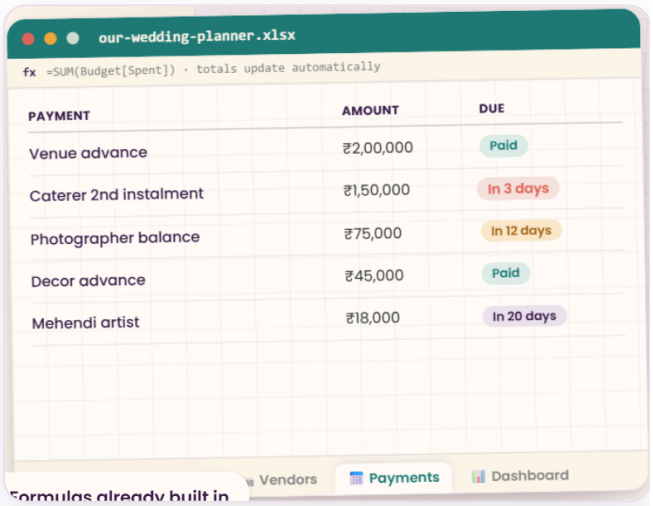

Product tour step 1 shows Sheet tab 1 (Tracker); step 2 shows Sheet tab 2 (Progress).

Products without a preview yet

A product with no sheet tabs shows a simple **Overview** tab that lists its **What's included** items marked “Ready”, with the file name taken from the page address. It never shows another product's data, so a new product looks tidy from day one.

No tabs yet: the automatic Overview.

The Wedding Planner's Payments tab, with tags from its due dates.

Recipe: a preview in ten minutes

A good preview has two to five tabs that match the real tabs in your template. Here's the workout example in full:

Tab	What to fill in

🏋️ **Tracker**	Columns: `Day` `Workout` `Minutes` `Status`
	Rows:
	`Day 1 | Full body | 30 min | Done`
	`Day 2 | Cardio | 25 min | Done`
	`Day 4 | Legs | 35 min | In 2 days`
	`Day 5 | Core | 15 min | Pending`
	Progress bar: `Challenge completed` · `60`

📈 **Progress**	Big numbers: `Days done · 18`, `Calories · 9,450`, `Streak · 7` Bars: `20, 35, 30, 50, 45, 60` · Donut: `40, 30, 30` · Chart label: `Weekly minutes`

Keep cells short

Short words and numbers look like a real sheet and fit on phones.

Use believable samples

Make the data look like what buyers will track themselves. It's clearly sample data, never real customers.

Check on a phone

After publishing, open the product page on your phone and watch the tabs switch.

CHAPTER 3

Test checklist

03

Try these once after setting things up. Use Razorpay test mode, or a small real order using a 99% test promo code that you delete afterwards.

☐ Upsell cards appear

UPSELLS

1. Add one or two upsells to a product and publish.
2. Open that product's page and click **Buy**.

Expect: an "Add to your order" section above the name box, one card per upsell, with your special price and the normal price crossed out.

☐ Total updates with ticks and codes

UPSELLS

1. Tick an upsell, then untick it.
2. Tick it again and apply an affiliate code.

Expect: the add-on line appears and disappears and the Pay button changes each time. The code's % comes off the whole total, add-on included.

☐ Add-on is delivered

UPSELLS

1. Complete a test order with one upsell ticked.
2. Check the thank-you page and the delivery email.

Expect: a separate block for the add-on with its own Download (and Copy to Google Sheets) button, and the add-on listed under "Add-ons (upsells)" in Shop → Orders.

☐ Preview shows your data

SHEET PREVIEW

1. Fill in the Sheet preview of a product and publish.
2. Open its page on a computer and on a phone.

Expect: your file name and tabs in the hero, tabs switching by themselves, numbers counting up, and status words as coloured tags.

Product tour matches

SHEET PREVIEW

1. In the Product tour tab, set each step's Mockup to the matching Sheet tab number.
2. Click through the tour on the page.

Expect: each step shows the right tab of your preview.
